DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-24 are drawn to a metal halide lamp device utilized starting wire, classified in class 315, subclass 209 M.
- II. Claims 25-28 are drawn to a starting wire formation for halide lamp device with a specific bending method, classified in class 313, subclass 341.

These inventions above are distinct from the other because of the following reasons:

- 1. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the starting wire of metal halide lamp as required in the invention I can be function at any manner such as in a vicinity place relative to the lamp position without any specific shape required while the starting wire in the invention II being formed/bent with a specific shape for fixing the lamp configuration.
- 2. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
